

JOB DESCRIPTION

SENIOR IMPLEMENTATION ENGINEER – ECOMMERCE IMPLEMENTATIONS

Company:

Pierce Washington (www.piercewashington.com) is an eBusiness consulting firm, with offices in San Francisco and Chicago.

Role:

We are looking for an experienced eCommerce Implementation Senior Engineer for a fulltime position in our Chicago office. Under general direction from one of our Application Architects, this individual will work closely with fellow team members to rapidly build and deploy large online ecommerce solutions. For small projects, this individual must be comfortable managing the majority of the project through its lifecycle. Strong analytic skills and an understanding of programming concepts are required so that individual can translate customer requirements into system specifications, configure system solutions to meet business requirements, execute unit testing, and document the solution for training and customer support. Along the way, this individual will develop stronger systems implementation, communication, and leadership skills. This position offers competitive compensation and benefits. Individual must be able to travel up to 25%.

Experience:

Bachelor or Master's Degree in computer science, engineering, or mathematics from a reputable four-year university. Minimum of three years of related experience required; excellent computer software skills; excellent written; verbal communication skills; and understanding of the Quote to Cash business process. Successfully working on multiple consulting projects implementing CRM applications. Salesforce.com knowledge a plus. Previous consulting experience at a Big 4 or similar firm is required.

Key responsibilities include:

- Manage complex, web-based technology projects through all phases of the project lifecycle, from project definition through implementation.
- Configure and script software application based on design requirements.
- Work closely with project manager to proactively identify potential issues and risks.
- Assist with the functional documentation of customer business requirements.
- Works with clients directly on small to medium sized projects.
- Translate business requirements into a technical solution.

Required Skills:

- Strong critical thinking, problem solving and analytical skills.
- Strong verbal and written communication skills.
- Understanding of systems development life cycle and a basic understanding of eCommerce application implementations.
- Detail oriented with strong organizational skills.
- A track record of outstanding performance.
- Eagerness to contribute in a team-oriented environment.
- Experience and comfort with the following technologies: HTML, XML, Java, JavaScript, Python, XSLT, XPATH, CSS stylesheet, jQuery, SOAP and relational database concepts & SQL.
- Quick learner and able to learn new technologies and web programming languages on own as necessary.
- Ability to meet client travel requirements.
